---

The Circle S Road Bridge over Boggy Creek is over 60 years old and is in need of structural repair. The support on the south end of the bridge is deteriorating due to age and erosion. In 2004, a temporary structural support was installed at the bridge. One of the wingwalls of the bridge and other parts of the bridge are also in need of repair.

This project will construct two drilled shafts at the south end of the bridge and place a steel beam on the shafts to support the bridge. The wingwall will be demolished and replaced along with other concrete repairs. Traffic guard rails will be installed and some improvements made to the flow channel of the creek. These improvements will make the bridge safer and add several years to the life of the structure.

The contract allows 60 calendar days for completion of this project.
